The graph shows the DSR signal $k_{red}$ as a function of temperature in °C. The graph includes lines for different conditions and substances:

- **Hydrogen** (light blue line)
- **CO** (red line)
- **Acetone** (yellow line)
- **After** (dark blue line)
- **Treatment** (brown line)
- **No. 1** (light brown line)

The graph suggests that the DSR signal increases with temperature for all conditions. The note at the bottom right indicates to compare with Fig. 3b.
